FULL-STACK DEVELOPER

Full-stack developer who took **MarianResearch**, a live research management platform for Marian College Kuttikanam, from requirements gathering to a production system now used by **100+ faculty, scholars, and staff**. Experienced end-to-end across the stack — JWT-based auth, role-based workflows, REST APIs, and containerized deployment — with a self-published Chrome extension serving 100+ active users on the side.

TECHNICAL SKILLS

Frontend	Next.js, React.js, JavaScript, HTML5, CSS3
Backend	Node.js, Express.js, REST APIs
Database	MongoDB, MongoDB Atlas
Deployment & Infrastructure	Docker, Hostinger, Vercel, Render, AWS, Google Drive API
Tools	Git, GitHub, Postman
Programming	Python, JavaScript

EXPERIENCE

Full-Stack Developer — MarianResearch

Marian College Kuttikanam

May 2026 – Present

research.mariancollege.org

- Independently gathered requirements from the college and designed a live research management platform, digitizing manual research-related workflows end-to-end.
- Built role-based modules (admin, faculty, research scholars, guides, coordinators, library) with JWT authentication, covering submission, document management, approval, portfolio, leave, and incentive workflows using Next.js, Node.js, Express.js, MongoDB Atlas, and REST APIs.
- Implemented a multi-stage faculty incentive workflow with automated verification/approval routing and downloadable finance documents; integrated Google Drive API for document storage.
- Deployed on Vercel/Render, then containerized with Docker and migrated to Hostinger; currently serving **100+ Users** across the institution.

Freelance Full-Stack Developer — Staff Management Website

Athma Counselling Center

Ongoing

- Building a staff management website for a real client based on business requirements and workflow needs.
- Managing development from requirement understanding through implementation and deployment.

SELECTED PROJECTS

MarkGPT — Chrome Extension

100+ Current Users | Published on Chrome Web Store

- Built a Chrome extension that allows users to bookmark specific messages across ChatGPT, Claude, and Gemini conversations.
- Created to solve the difficulty of returning to important messages within long AI conversations.

HP Crafts — Business Website

Freelance Client Project | hpcrafts.in

- Designed and developed a responsive business website for a real client using HTML and CSS.
- Built the project independently without AI assistance during the initial development.

TEDxKCMT — Ticket Booking Website

TEDxKCMT | TedxKcmt.org

- Built a ticket-booking webpage for TEDxKCMT using HTML and CSS while pursuing B.Com Computer Applications.
- Worked as an active member of the media and technical team, creating promotional video content that reached millions of views.

ACHIEVEMENTS & LEADERSHIP

- Conducted a hands-on **Git & GitHub + AI website development workshop** for B.Sc. Computer Science students, teaching them how to build and deploy a static website.
- TEDxKCMT Media & Technical Team Member — created event content and promotional reels with million-plus views.
- Active GitHub contributor with **40+ public repositories** and **926 contributions in the last year**.

EDUCATION & CERTIFICATIONS
